

Dear scientist,

you are a specialist in the research of tick-borne diseases. We are specialists in the gentle removal of ticks from humans and animals.

Our interdisciplinary team (including a physician, a veterinarian, and a physicist) has evaluated common tick removal methods and developed a new patented solution designed to prevent the squeezing of ticks during extraction. The Tickgripper is easy to use and removes ticks by a self-rotating, flexible gripper head.

All participants of ITPD 2026 receive a sample of the Tickgripper as enclosure in the registration documents.

Please try the Tickgripper and see the results for yourself. We greatly appreciate your feedback which you can share with us by email.
